

Pond edge, ready for bungee & natural materials used for camouflage

2-Man Deadly Duck Modular Blind arrives in a box with the above parts.

Un-box and separate the parts into like groups. Blind shown with drop door in, EZ-FAB not trimmed

3 Bolt sizes: Longest for the hinges, because it goes through both layers at one time.

Short are for the triangles.

Balance are for the hinges & door closures. Always use washers for the hinges.

Extra bolts/nuts are included to use in place of the wire U shaped pin connectors.

Triangles: A pair is used at each location. The larger one are for the bottom. Smaller are for the top.

When using, always square the blind so that the drop down door is square.

Use 2 ea a 10 MM wrenches or use a 10mm ratchet to speed things up.

1. Washers should always be used with the rubber parts and on the drop door handle.

2. The non-door end may be put together without the vertical strut.

Strut makes the end sturdier for transport, but is not absolutely needed.

3. To use 2 blinds together (as modular blinds), with one against the other to allow for open for pass through in the middle, choose to use the L Connector/brackets. One connector on the top & bottom instead of the triangles/vertical strut. Match up bolt holes to the frame.

4. Attach the EZ-FAB mesh to the OUTSIDE of the end frames with zip ties. Leave extra on all sides except the bottom. Trim where needed to eliminate interference with the doors and drop lid.

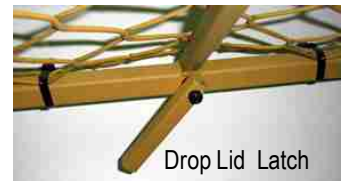

6. Cut the bungee about a foot short of width. Tie one end of the bungee with a double half hitch.

Weave it thru the struts or mesh in at least one spot. Tie a double half hitch on the other side.

Best if there are 2 strip on each side, at about 1/3 marks.

7. Shooting door hinge goes on top of metal/strut on bottom front panel & behind the shooting door. .

8. Door latch is 3rd pic. Big piece goes outside on the tubing; smaller piece goes inside, with the longest bolts/washers/nuts. Beveled edge goes inside the door.

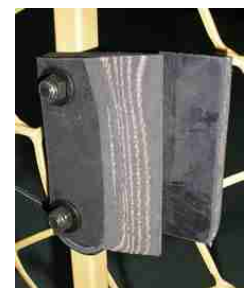

Drop Lid Latch

Below: L connector instead of triangles/vertical strut.

Below: End with door & triangles..... Door latch from inside.

L connectors with 2 bolts on top. See how the zip ties are trimmed to the outside of the panels!
